

M. SAQIB MEHMOOD

Senior Java Backend Engineer | Spring Boot | Microservices | Cloud-Native Distributed Systems

msqbmehmood@gmail.com • (+971) 562-821-813 • Abu Dhabi, UAE

LinkedIn • GitHub • Twitter

PROFESSIONAL SUMMARY

- **Senior Backend Engineer** with 7+ years of expertise designing and scaling enterprise-grade Java/Spring Boot microservices handling 10M+ monthly transactions and 1M+ daily users.
- Track record of delivering high-impact results: 40% latency reduction, 99.9% uptime, \$50K+ cost savings, and 30% revenue growth through architectural optimization.
- Specialization in distributed systems, REST/GraphQL/gRPC APIs, microservices patterns (DDD, saga, CQRS), async messaging (Kafka/RabbitMQ), database optimization, and cloud-native DevOps (Kubernetes, Docker, CI/CD).

PROFESSIONAL EXPERIENCE

Senior Software Developer

08/2023 – Ongoing

Oxinus Holdings

Abu Dhabi, UAE

- Optimized database queries and implemented Redis caching, reducing API latency by **25%** across 50+ endpoints serving **100K+ daily requests**.
- Architected and deployed Spring Boot payment gateway integration (OAuth2/JWT) enabling **\$2M+ annual transaction volume** with **99.95% uptime**.
- Established code review standards and CI/CD best practices, reducing deployment failures by **80%** and accelerating release cycle.

Senior Backend Developer (Java Focus) | DevOps Engineer

08/2021 – 08/2023

ArhamSoft Pvt. Ltd.

Islamabad, Pakistan

- Led backend team of 5 engineers building microservices handling **10M+ monthly transactions**, mentored on Spring Boot architecture and system design patterns.
- Designed domain-driven microservices ecosystem with Spring Data JPA, reducing database query time by **40%** and improving overall throughput to **1000 req/sec**.
- Implemented Kafka-based event streaming for inventory sync, eliminating **\$50K+ monthly cost** in manual reconciliation and reducing data inconsistencies to **<0.01%**.
- Architected Kubernetes deployment pipeline with auto-scaling, achieving **99.9% uptime** SLA and reducing incident response time by **60%**.

Backend Developer

11/2020 – 07/2021

Gordian Solutions

London, UK

- Designed and deployed **15 RESTful APIs** for B2B e-commerce platform, supporting **500+ concurrent users** with sub-100ms response times.
- Delivered **20+ high-impact backend features** in 2 months, driving **30% revenue increase** (\$1.5M additional ARR).
- Optimized PostgreSQL schema and indexing, reducing slow query count by **85%** and enabling multi-tenant SaaS deployment for 3 enterprise clients.
- Implemented JWT-based role-based access control with audit logging, achieving SOC 2 Type II compliance requirements.

FEATURED PROJECTS

SpotlightPos - Enterprise POS Microservices Platform

2023

<https://www.spotlightpos.com>

- Architected Java 17 + Spring Boot microservices backend handling **50K+ daily orders** for food delivery network across 3 countries.
- Engineered 4 independent services (Orders, Inventory, Payments, Analytics) using OpenAPI contracts and async messaging, reducing inter-service coupling to **<10%**.
- Optimized Spring Data JPA queries and added Redis caching, reducing median API response time from 800ms to **120ms (85% improvement)**.
- Implemented circuit breakers and retry logic for payment gateway integration, reducing transaction failures from **2.5% to 0.05%**.

Posom - Microservices-Based POS Platform

2023

<https://www.posom.io/en>

- Architected multi-tenant Java Spring Boot microservices ecosystem serving **500+ SMB merchants** with **1000+ transactions/min** processing capacity.
- Designed domain-driven APIs for POS terminal integration and real-time inventory sync, achieving **99.9% message delivery guarantee** with Kafka.
- Optimized PostgreSQL indexing strategy for multi-tenant isolation, reducing query latency by **60%** while maintaining complete data separation.
- Engineered Viva payment gateway integration with idempotent API design, handling **\$50M+ annual payment volume** with **zero reconciliation issues**.
- Implemented API gateway (Kong) for rate limiting, authentication, and request routing, reducing DDoS impact by **90%**.
- Built centralized ELK stack (Elasticsearch, Logstash, Kibana) for log aggregation across 10+ services, enabling **sub-second debugging** of production issues.
- Deployed 15 microservices on Kubernetes with Helm charts, enabling **zero-downtime deployments** and reducing deployment time from 1hr to **3 minutes**.

Metamuto - Multi-Chain NFT Marketplace

2022

<https://nftpad.arhamsoft.org>

- Architected and developed marketplace backend using Java Spring Boot with production-grade layered architecture and SOLID design patterns.
- Modeled and optimized persistence workflows using PostgreSQL and MongoDB for metadata-heavy transactions.
- Engineered RESTful APIs for listing, bidding, and purchase flows with validation, pagination, and role-based access control.
- Integrated with multiple blockchain providers through modular adapter services and fault-tolerant retry handling.
- Implemented secure authentication/authorization using Spring Security with JWT and OAuth2 flows.
- Deployed microservices with Docker and Kubernetes with asynchronous processing (Kafka/RabbitMQ) for transaction events and background jobs.

Ned - URL Shortener Platform

2021

<https://ned.link>

- Architected and developed Java Spring Boot backend for high-throughput URL shortener platform with sub-50ms redirection latency.
- Created RESTful APIs with Spring Security, OAuth2, and JWT for secure multi-tenant access and granular permission management.
- Designed analytics services for clickstream aggregation and reporting of link engagement metrics with real-time dashboards.
- Implemented Redis-based distributed caching for ultra-fast URL redirection and session management.
- Deployed containerized services with Docker and Kubernetes for reliable scaling during traffic spikes.

Verinvo - Enterprise E-Invoicing Microservices Platform

2022-2023

<https://verinvo.com>

- Architected and developed compliant e-invoicing solution using Java Spring Boot microservices architecture.
- Designed and implemented RESTful APIs for integration with tax authorities (AADE) and PEPPOL network.
- Engineered scalable PostgreSQL schema with indexing and partitioning for efficient invoice storage and retrieval.
- Implemented RabbitMQ-based asynchronous pipelines for high-volume invoice submissions with guaranteed delivery.
- Tuned system performance to handle 10,000+ daily invoice submissions while maintaining 99.9% uptime and sub-100ms response times.

NFT Marketplace - Multi-Chain Blockchain Platform

2021

<https://hex-test.arhamsoft.org>

- Developed Java microservices supporting multi-network blockchain workflows and transaction orchestration across Ethereum, Polygon, and Binance Smart Chain.
- Implemented robust service contracts and validation layers for reliable cross-chain operations with settlement guarantees.
- Created RESTful APIs for minting, listing, and transaction lifecycle management with comprehensive audit logging.
- Designed centralized configuration and feature-flag controls for chain-specific business rules without code redeployment.
- Integrated API gateway policies for unified access control, rate limiting, and security compliance with OAuth2 flows.

TECHNICAL SKILLS & COMPETENCIES

Core Languages: Java 8/11/17/21, SQL, YAML, JSON, XML

Spring Ecosystem: Spring Boot (2.x/3.x), Spring Cloud, Spring Security, Spring Data JPA, Spring Data R2DBC, Spring Test, Spring Cloud Stream, Spring Cloud Config, AOP, Transaction Management

Persistence & Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Cassandra, Spring Data JPA, Hibernate, Query optimization, Indexing strategies, Database partitioning, Liquibase/Flyway migrations

APIs & Protocols: REST, GraphQL, gRPC, OpenAPI/Swagger, OAuth2, JWT, OIDC, mTLS, CORS, HATEOAS

Async & Messaging: Kafka, RabbitMQ, ActiveMQ, Spring Cloud Stream, Event Sourcing, CQRS patterns, Message-driven microservices

Microservices Architecture: Domain-Driven Design (DDD), API Gateway patterns, Circuit Breaker, Retry Logic, Saga pattern, Service mesh concepts, Distributed tracing (Jaeger/Zipkin)

Cloud & DevOps: Docker, Kubernetes, Helm, Docker Compose, AWS (EC2, RDS, S3, Lambda, Cloud-Watch), GCP (Compute Engine, Cloud SQL), Azure, CI/CD (Jenkins, GitHub Actions, GitLab CI), ArgoCD

Observability & Monitoring: Prometheus, Grafana, ELK Stack (Elasticsearch/Logstash/Kibana), Loki, Jaeger, Zipkin, SonarQube, Application Performance Monitoring

Testing & Quality: JUnit 5, Mockito, TestContainers, Integration testing, Unit testing, Load testing (Apache JMeter), TDD, Code coverage analysis

Build & Package Management: Maven, Gradle, Docker, Artifactory, Nexus

Version Control & Collaboration: Git, GitHub, GitLab, Bitbucket, code review practices

Security & Compliance: Spring Security, OAuth2, JWT, RBAC, OIDC, Encryption, Audit logging, SOC 2 compliance, GDPR awareness, API rate limiting

EDUCATION

BS in Computer Science

Allama Iqbal Open University

2019

Pakistan

CGPA: 3.6/4.0

Focus: Software Engineering, Data Structures, Algorithms

CORE COMPETENCIES

Architecture	Microservices,DDD, API gateways, event-driven design, saga pattern, CQRS, service mesh
Database	Query optimization, indexing, partitioning, ACID transactions, replication, multi-tenancy design
Performance	Query tuning, caching strategies, connection pooling, load testing, JVM profiling, throughput optimization
DevOps	Infrastructure as Code, containerization, orchestration, blue-green deployments, automated rollbacks
Leadership	Team mentoring, technical interviewing, code review leadership, architecture decisions, on-call incident management
Observability	Distributed tracing, metrics collection, log aggregation, SLO monitoring, root cause analysis

LEADERSHIP & ACHIEVEMENTS

- **Team Leadership:** Led backend engineering teams of 5-10 engineers on high-impact microservices projects, mentoring on system design, Spring Boot patterns, and production best practices.
- **Architectural Impact:** Owned major architectural decisions for scalability, reliability, and security; introduced event-driven patterns and microservices decomposition resulting in 40% performance improvement.
- **Cultural Initiatives:** Championed observability-first and testing-driven culture, implemented comprehensive monitoring and centralized logging across 10+ services.
- **Code Quality:** Established and led technical code reviews, raised code quality standards, and implemented SonarQube-based quality gates reducing defects by 60%.
- **Knowledge Sharing:** Regular technical presentations on microservices patterns, Spring Boot best practices, and system design; mentored 8+ junior engineers on backend architecture.
- **Business Impact:** Delivered high-ROI features and optimizations directly contributing to \$1.5M+ ARR growth and \$50K+ monthly cost savings through infrastructure optimization.
